

Sterling Digibinder Plus

The STERLING DIGIBINDER has created a new standard for on demand perfect binding equipment. Never has a perfect binder been able to create books of such quality with automatic set up at such an affordable price. It has set the bar high for all perfect binders to follow.

The DIGIBINDER is completely self-adjusting. The pneumatic clamp and nipper adjust automatically. A compressor is included. Bind a thin book, then a thick book, without any adjustments whatsoever. Bind two sheets to two inches thick. The unique, heavy duty roughing blade allows for the binding of offset stock, coated stock, and stock with oil based or wax based inks.

Twin glue rollers ensure an even glue application as does a third, metering roller to smooth out the glue. The machine side glues for hinge covers and even creates a light hinge due to the nipper pressure, which is adjustable. Bind perfectly square backed books or pads.

The STERLING DIGIBINDER PLUS has all of the standard features of The DIGIBINDER® plus a few extras: It includes a stand, which is on casters, as well as a safety cover which will stop the operation of the machine when lifted. More importantly, it includes a vacuum waste removal system, which allows for the use of even heavier duty notching pins, which prepare the spine for gluing.

SPECIFICATIONS

Max. Binding Capacity	2"
Max. Binding Edge	12 1/2"
Cycle Speed	Up to 360 books per hour
Power	220V, 15Amps, Single Phase
Warm Up Time	30 Minutes
